

GENETIC TESTING FOR YOUR COW-CALF OPERATION

Premier proudly partners with Zoetis, the largest global animal health company, to bring member-customers INHERIT Select™ and INHERIT Connect™ genomic testing for commercial cow-calf operations. With this genetic tool, producers can peer into the genotype of their animals and pinpoint traits for the ability to impact productivity and profitability. The test can unlock genetic information to help producers make decisions for short- and long-term success.

INHERIT Select™ is a genomic test for commercial replacement females (heifers and cows) that provides Genomic Expected Progeny Differences (GEPD) and Percentile Rankings for sixteen traits and three economic indexes, as well as sire parentage and genomic approximations of breed composition, to collectively enable more informed selection, breeding and marketing decisions.

TRAITS AND INDEXES

ZOETIS TOTAL RETURN INDEX

- Birth Weight (BW)
- Weaning Weight (WW)
- Yearling Height (YH)
- Docility (DOC)
- Scrotal Circumference (SC)
- Teat and Udder Composite (TUC)
- Milk
- Mature Weight (MW)

ZOETIS COW|CALF INDEX

- Yearling Weight (YW)
- Dry Matter Intake (DMI)
- Feed to Gain (F:G)
- Carcass Weight (CW)
- Intramuscular Fat (IMF)
- Ribeye Area (REA)
- Fat Thickness (FAT)

ZOETIS FEEDLOT|CARCASS INDEX

- Tenderness (TND) MVP

INHERIT Connect™ is for INHERIT Select customers who may have portions of their bull battery that do not have HD50K genotypes included in the genetic evaluations. It helps determine parentage for heifers tested with INHERIT Select. With INHERIT Connect, commercial cow-calf producers can connect candidate sires to tested daughters, connect sires and daughters to other genotyped animals in the evaluation, and enable more complete sire determination across groups of tested heifers.
